

RIFFLE TOP LOOPED WIRE SCREENS

**Can increase capacity
up to 10% over flat top wire**

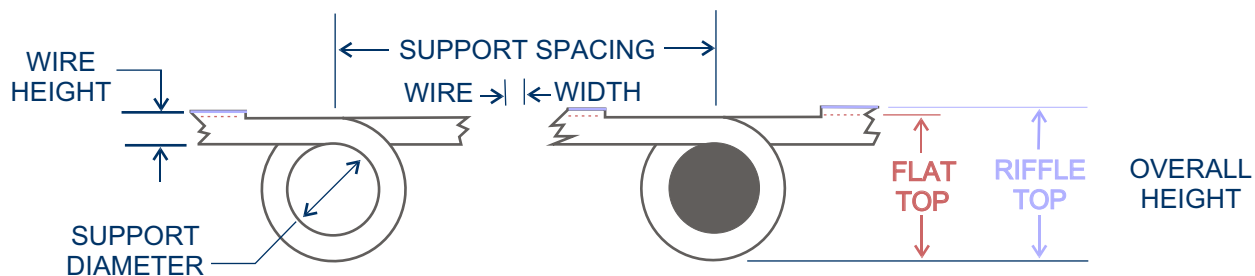

**Particularly suited
for use on
vibrating screens
and sieve screens**

Constructed in the same reliable method as other Hendrick Looped Wire Screens.

Riffle Top offers additional benefits for specific applications. Riffle markings coined into the top surface of the wire:

- Increases dewatering efficiency as the raised surfaces help guide fluids toward the opening
- The irregular surface helps reduce caking in difficult to screen material
- Longer wear as you have more metal on top where you need it

***Riffle Top is particularly suited for use on all
vibrating screens in applications such as coal and ore dewatering***
